PHONOLITE'S FUTURE.

Mining Man Sees Nothing But Goodness Ahead of It.

Orson Smith, a well known mining man of Logan, who recently purchased a large interest in the Mohawk-Duluth mine at Phonolite, Nevada, has returned from an examination of the property not only highly pleased with the showing being made in that high grade proposition, but enthusiastic over the future of the entire district.

"Phonolite is in the midst of a country of remarkable mineralization," said Mr. Smith yesterday. "It is a gold belt surrounded by districts that produce the four chief minerals. Only six miles west is the old Lodi mine, a famous lead-silver producer; on the east is the old Berlin property, a copper proposition; on the south is the Ellsworth district, which has good gold-copper values; southwest is the Green Springs district, which is exciting great interest, and northeast the Gold Park properties have been operated for years. Fairview, with its famous Nevada Hills mine, is thirty miles northwest of Phonolite, and the intervening country is all highly mineralized."

"I am informed that the Southern Pacific has decided to extend its line from Austin to the Berlin properties. If it does the line will go close to our workings, and it will mean greatly increased activity for that entire region."

"The values in the Phonolite district are gold and silver with gold predominating. The formation is quartz cropping through porphyry, and rhyolite ribbed by phonolite. Such claims as the July, Climax, Black Butte, Sonora and others have gold all over them. They have enough stuff in sight to justify starting a mill. Veins from four to twelve feet wide have been opened, the values generally running from \$8 to \$16 a ton, with assays as high as \$200 a ton."

"The ores on these claims are oxides, but down the hill, 100 feet lower, where the Mohawk-Duluth company is sinking its shaft on the contact vein between phonolite ledges and porphyry, there have been sulphides from the surface down and they are increasing at depth. The vein is ten feet wide, with a northeast and southwest trend and dipping toward the east. The shaft is down 100 feet. It has followed the foot-wall, which is perfect, but the hanging wall is not yet well defined. The streak of high grade ore, identical with Goldfield-Mohawk ore, about fourteen inches wide, is on the foot-wall, in a tale formation. Conditions generally are improved as depth is attained. The last assay taken from the high grade streak gave values of \$3266.80. July assays were \$1345 and \$63.93. Those taken in May went \$861.76, \$1181.20 and \$334.44. An average sample taken near the surface went \$1798.29. These give a good idea of how the stuff has run on the way down. The vein matter outside of the high-grade streak averages around \$15 a ton."

"The Mohawk-Duluth shaft has recently been equipped with a hoist that is easily good for 700 and 800 feet depth and the operations now are at a stage where developments out of the ordinary may be expected at any time. The Paymaster is pushing its tunnel in interesting ground and Salt Lake are starting work on the Independence, which appears to be an excellent prospect."—Western Nevada Miner.

\$200,000 ORE IN GOLD CRATER

RICHEST BODY OF ORE IN THE STATE WAS UNCOVERED LAST WEEK.

The greatest strike in the history of mining camps was made in the Gold Circle district the middle of last week. The Arizona boys arrived in town Friday afternoon and showed some samples that would easily reach the \$200,000 mark. The strike was made on ground first located by Jas. McDuffy and later relocated by Dick Bamberger, who made the strike. Lead gold, some of which is larger than a five dollar gold piece and from one-eighth to one-sixteenth of an inch thick, is plentiful, and Mr. S. C. Dowling, one of the Arizona boys, says that there is positively a two-inch streak that is solid gold. This is hard to realize, but nevertheless it is the absolute truth. Nothing like it has even been seen nor heard tell of, and Mr. Dowling says that Rider Hagar's imaginations of the King Solomon mines are not a comparison. Besides the streak there is twenty-five feet of ore that if treated by the most primitive method would make the owner a millionaire.

Last week was spent by the writer in that wonderful new gold district, forty miles west of Tuscarora, called Gold Circle. It is needless to say that there remains no doubt in our minds as to the wonderful extent and richness of that section and we firmly believe that one of the coming great gold camps in the world lies undeveloped there. Every man that has located any ground and done the location work in a promising place has uncovered ore. The greater portion of the discoveries at present will run from \$20 to \$100 of free milling ore, yet some ore has been found that assays into the hundreds.

Contacts of two different character porphyries are numerous, invariably making ore.

The principal dike that traverses the country for a distance of about four miles, and the one on which James McDuffy made the first strike in June of this year at the northern portion of the district, is the same one that McMahon & McCanley have recently opened the four feet of ore that averages over \$200 per ton in the extreme southern part of the camp, and anywhere between the two strikes you can take samples from the dike and get good pannings. Although it is conceded that this is the main ore chute it is not the only one, as Menkin and Schein, situated between the two, about midway, and about one and a half miles to the west, have uncovered two feet of quartz, traceable for 200 yards on the surface that pans "like a house afire." They are now developing it as fast as possible and with every foot of depth there is a marked increase in the values. The two Mac's also own a claim adjoining the above ground on the south and have opened up a ledge that is estimated to pan on an average of \$50. The ledge is about two feet wide and can be followed a long distance.

Northwest of Menkin & Schein the Arizona boys have a group of claims on the main dike which are opened up in numerous places and good prospects are found on all of them. The Arizona boys are interested in the claims with E. A. P. Johnson, W. H. Sanders and R. T. Noble.

P. A. Leamy owns a group of claims in the heart of the district and from a number of ledges that run through his ground good pannings are obtainable.

Southeast of P. A. Leamy and joining on the two Mac's ground, Dan McKenna and associates own a group of claims, and on one called the Jackson a mine is sure to be opened up. In early days a shallow hole had been dug, presumably by the Mexicans, and a quantity of quartz thrown out, some of which gave assay returns of \$20.40. About fifty feet north of the old hole a ten-foot shaft was sunk exposing a few feet of ore that assayed \$10. This ledge was six inches wide on the surface and panned but slightly.

A great many of the prospectors have left the district for a warmer climate, others are staying to either finish their location work or for the winter.

Another meritorious property, called the Water Witch group, owned by W. D. McClelland, is in the front rank. Mr. McClelland showed the writer some fine specimens of ore freely sprinkled with gold and he said it was taken from a good lead.—Tuscarora Mining News.

Do you know that Pinesalve Carbollized acts like a poultice in drawing out inflammation and poison? It is antiseptic. For cuts, burns, eczema, cracked hands it is immediate relief. Sold by Tonopah Drug Co.

ALLEGED WIFE MAY SUE FOR DIVORCE

NEW YORK, Oct. 2.—Before Justice Seabury of the supreme court today was a motion entitled "Platt vs. Platt," and the calendar stated that it was a motion to "frame issues" for presentation to a jury.

"This is the first move in an action for absolute divorce brought by Mrs. Thomas C. Platt, formerly Mae Wood, against United States Senator Platt," said Joseph Day Lee of Wall street, representing the plaintiff.

"I appeared in the case as local counsel representing O'Flaherty and Fulton, lawyers of Richmond, Virginia," he continued. "They claim that their client was married to Senator Platt in 1901 at the Fifth avenue hotel prior to his marriage to Mrs. Lillian T. Janeway. We expect that the case will be reached in November."

John B. Stanchfield, for Senator Platt, asked that the matter be heard in private by reference. He said Senator Platt never was married to Miss Wood, and therefore there was no ground for divorce. Decision was reserved. Mae Wood is said to be in a Michigan town, ready to come on when her action has been placed on the calendar.

LUCKY LEASERS ON SKIDOO.

Predictions That Some Will Rival Name of Mohawk.

The leases which are being operated on various portions of the Skidoo Mines company's ground are meeting with such success as to warrant the prediction that some of them will rival the fame of the Mohawk leases—the propositions that made Goldfield great. However, the Skidoo leases will receive less attention from the public, owing to the fact that they are all held under private ownership instead of being run by stock promoting corporations.

The Hoyt Brothers' lease is the oldest and best known, the owners having made a strike of wonderfully rich ore within a few feet of the surface soon after starting work. Numerous pockets of picture rock, much of which would assay in figures upward of \$10,000 to the ton, have since been encountered in their workings, while the entire ledge maintained a very high average value down to a depth of sixty feet, and there it was bigger and richer than ever. The owners then left the ledge and started a permanent work shaft, which they have equipped with a gasoline hoist, and are sinking to catch the ledge at a depth of 100 feet. This will probably be accomplished within the present month, when a regular and highly profitable ore production will be made.

The Osborne lease, owned by Messrs. Osborne, Patten and Whornton, easily holds first place in quality of ore produced, and as an ore shoot was recently opened which is now yielding ore that is believed to be equal to the Hoyt brothers' bonanza rock. In fact, it is so much like the Hoyt ore that it looks as if it came from the same place. They now have about 250 tons of sorted ore piled and sacked awaiting the completion of the Skidoo mill and are adding more to the accumulation every day. Macleod, Bernison and Frederickson have leased the extension of the Hoyt block and are sinking to catch the same ore shoot, with flattering indications of early success.

The Shackett Mining company has opened several rich ledges on a leased block of Skidoo ground and is driving a crosscut tunnel to cut them all at considerable depth.

While these leases are bound to create wealth at a rapid rate for their fortunate owners as soon as milling facilities are provided, at the same time they are adding immensely to the permanent wealth producing abilities of the district and the wonderful golden resources of the great Skidoo mine.—Skidoo News.

Mothers with little children need no longer fear croup, colds or whooping cough. Bees Laxative Cough Syrup tastes good. It works off the cold through the bowels, clears the head. Guaranteed. Sold by Tonopah Drug Co.
